FIBER SUSTAINABLE GROWING CONTAINERS

Two Unique Fiber Container Lines

One Dedicated Purpose - Sustainability

- Breathe like clay, providing an optimal environment for root systems.
- They biodegrade quickly when planted or worked into the soil for zero waste (no recycling required).
- Automation friendly
- Durable for growing and retail cycles.
- Available in numerous sizes and styles.
- Our Organic version of EcoGrow containers have been certified for organic farming and gardening in both the United States and Canada according to NOP Regulation.

- Breathe like clay, providing an optimal environment for root systems.
- Can be easily and harmlessly recycled in your municipal recycling programs.
- Binding agents help increase their strength and longevity in such applications as planters, hanging baskets and other large containers.
- Durable for growing and retail cycles.
- Helps insulate root systems to protect plants in fluctuating temperatures while offering superior drainage and moisture retention.
- Available in numerous sizes and styles.

Fiber Slurries

Supporting Molded Pulp Applications

NATURAL

- Ideal for a variety of industrial packaging including corner and edge guards and roll cradles
- 100% biodegradable

ECO

- Plant based binder helps retain water similar to a wax coating
- Fungicide inhibits the growth of mold
- 100% biodegradable

HORTICULTURE

- Our most durable slurry; contains non-organic binding agent
- Suitable for hanging baskets and patio planters
- 100% biodegradable

ORGANIC

- Certified for Organic Growing
- Plant based binder helps retain water similar to a wax coating
- 100% biodegradable and compostable

It all starts out with recycled paper products like uncirculated newspapers, unless we're making organic products then we use blank newsprint. The shredded paper gets mixed together with water in large tanks before molds are used to help re-form the slurry into a variety of shapes, sizes and applications.

Ovens are used to make sure the products are nice and dry and ready for packaging. Fiber slurries can be used to create all kinds of things like growing containers, hanging baskets, protective packaging, consumer products and more.

Two Versions of EcoGrow®

Two Very Different Purposes

EcoGrow	EcoGrow - Organic
• Organic Certified - No	• Organic Certified - Yes 
• Plant based binder for strength - Yes	• Plant based binder for strength - Yes
• Material - Recycled newsprint (printed)	• Material - Recycled newsprint (blank)
• Biodegradable/Plantable - Yes	• Biodegradable/Plantable - Yes
• Beneficial in Composting - No (inks/fungicide)	• Beneficial in Composting - Yes
• Fungicide - Yes	• Fungicide - No

FAQS

When should Organic EcoGrow be used?

Organic EcoGrow was created for certified organic growers who are restricted from using non-organic certified containers. Additionally, the binding agent is reduced (resulting in slightly less stability) which allows them to biodegrade more quickly in soil.

Why are EcoGrow containers a viable growing alternative?

Fiber growing containers breathe like clay pots, but instead of extracting water from the plant, they actually help retain water by creating an optimal environment for root system development.

What about the root system?

Fiber growing containers experience what is known as air pruning (also called self-pruning). When roots are exposed to air (combined with the absence of high humidity) roots essentially "burn" off, which causes the plant to continuously produce new, healthy roots.

Can EcoGrow containers be recycled again?

Yes, the containers can be safely included with your local municipalities paper recycling program.

EcoGrow® Containers

How They Handle Real-World Growing Conditions

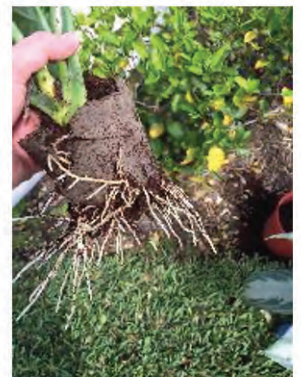

Purpose of EcoGrow® Growing Trials:

- Validate the integrity of fiber containers under normal, typical greenhouse growing and cultural conditions – including varying irrigation practices.
- Evaluate and confirm finished product presentation and integrity throughout the retail sales channel/ ship-to-shelf sale.
- Evaluate and confirm fiber container degradation over time, as well as plant performance, in simulated consumer applications where fiber containers are planted.

The trials featured:

- 3.75 URC Geranium Trial – Direct Stick
- 4.00 Rosemary Trial – 50 count Rooted Liners
- 4.00 Organic Trial – 72 count Rooted Liners
- Perennial Liner Trial – 50 count Rooted Liners w/shift
- 3.75 Planted Pot Geranium Trial
- 4.00 Herb Trial – 10-week crop, rooted cuttings
- 3.50 Planted Foliage Liner Trial
- 4.00 Annual Trial

EcoGrow® container with expose root system

Conclusions:

- Overall, the fiber containers held up extremely well during the growing duration under normal, cultural growing conditions.
- They proved to be strong and resilient when handled and their composition was not weakened under normal irrigation practices.
- Root systems developed as they would in plastic containers, and in many cases, appeared to be larger, healthier and more fibrous.
- In short, fiber growing containers are a suitable alternative to plastic containers for growers searching for a sustainable growing solution.

Two Versions of FiberGrow®

Two Very Different Purposes

FiberGrow	FiberGrow WaxTough
• Organic Certified - No	• Organic Certified - No
• Binding agent for strength - Yes	• Binding agent for strength - Yes
• Material - Recycled paper products	• Material - Recycled paper products
• Biodegradable - Yes; Plantable - No	• Biodegradable - Yes; Plantable - No
• WaxTough Coating Applied - No	• WaxTough Coating Applied - Yes
• Fungicide - Yes	• Fungicide - Yes

FAQS

When should FiberGrow WaxTough containers be used?

Our WaxTough coating offers an aesthetically pleasing, rich, dark brown appearance to any of our FiberGrow products. The coating provides enhanced durability and structural integrity, making it virtually impervious to moisture. Ideal for hanging pots with brass eyelets and wire hangers.

How is the WaxTough coating applied?

The WaxTough coating is the last step in the production process and is applied with a spray mechanism for even coverage.

What about the root system?

Fiber growing containers experience what is known as air pruning (also called self-pruning). When roots are exposed to air (combined with the absence of high humidity) roots essentially "burn" off, which causes the plant to continuously produce new, healthy roots.

Can FiberGrow containers be recycled again?

Yes, the containers can be safely included with your local municipalities paper recycling program.

HC fiber growing containers are produced using recycled newspaper in our closed-loop manufacturing facility in Canada to eliminate water waste.

They breathe like clay pots, provide the perfect environment for root development and insulation, are automation friendly, contaminant free, durable and in some cases, certified for organic farming.

MORE BENEFITS WITH FIBER

HC fiber hanging baskets are produced using **recycled newspaper** in our closed-loop manufacturing facility in Canada to eliminate water waste.

They're incredibly durable, able to withstand the continual weight of moist soil, help insulate root systems, offer superior drainage and moisture retention and are highly customizable based on your needs.
