

Sustainable Protective Packaging
Solutions for Your Unique Shipping Needs

Roll Cradles

Protective solutions are great for your business and shipping operations and even better for the planet.

Why fiber cradles?

Packaging cradles help optimize freight and storage while offering enhanced safety and better control when transporting products.

Fiber cradles can be used in various applications. The material provides protection, such as cushioning properties, and helps protect against the elements, and helps absorb moisture while in transit - all without compromising integrity. Plus, this sustainable alternative to traditional foam packaging products enables customers to support their sustainable commitments - ensured by our third-party certifications.

Why choose HC cradles? HC Sustainable roll cradles are made from 100% certified recycled material, making them one of the only certified packaging cradles in-market. Our cradles are designed for performance, offering durability and superior cushioning properties, yet are lightweight and economical. A complete portfolio of sizes and styles is available.
